

I wish to support RM-10808 as the best solution for amateur radio. It takes nothing away from those who wish to use Morse code, and will enable A.R. to increase their numbers. This will help them to recruit new members to continue their volunteer work under the Homeland Security Agency. The only ones opposing this are old hardliners who say "I had to pass CW so they should". This is ridiculous and does not help amateur radio in it's support of our nation's security.
